China's New Concept of Bio-based War Includes Vaccines With "Backdoors" As Bioweapons

On February 14, 2020, General Secretary of the Chinese Communist Party and Chairman of the Central Military Commission, Xi Jinping, emphasized the need to incorporate biosecurity into China's national security system.

x

In China, biosecurity is a euphemism for "bio-based war" because so much of Chinese military doctrine is devoted to the offensive use of biotechnology.

The 2011 version of "Chinese People's Liberation Army Military Language" provides the following definition:

Biological warfare refers to the use of biological weapons to injure humans and animals and destroy crops. It was formerly called germ warfare. In combat, biological warfare agents are used in various ways to cause epidemics in the opponent's army and the rear area, and large areas of crops are necrotic, so as to achieve the purpose of weakening the opponent's combat effectiveness and destroying its war potential."

But China's military distinguishes between traditional biological warfare and "bio-based war" using "military biotechnology."

In his 2012 article “Development of military biotechnology and the future of bio-based war,” Major General Fu-Chu He wrote:

x

In future wars, military biotechnology will promote the bio-based weaponry and equipment, bio-based forces and bio-based combat style.”

It is important to note that Major General Fu-Chu He was President of the Academy of Military Medical Sciences, Vice President of China’s Academy of Medical Sciences, an Alternate Member of the 18th Central Committee of the Chinese Communist Party and Vice Director of Scientific and Technical Committee affiliated to Central Military Commission, which is China’s equivalent of the U.S. Department of Defense’s DARPA, the Defense Advanced Research Projects Agency.

That is, Major General Fu-Chu He was Xi Jinping’s closest military advisor on matters of “biosecurity.”

The distinction between bio-based war and biological warfare was described in a November 9, 2020 [article](#) by retired Colonel Xin Yang, who is a professor in the Department of Military Teaching and Research at Nanjing University.

Colonel Yang views general biological war using traditional bioweapons as having many of the same limitations as nuclear warfare in terms of their potential widespread destructive power. X

He prefers the scalpel of bio-based war to the sledgehammer of biological warfare.

Aspects of bio-based war include:

Micro-attack: “Nonlethal” bioweapons is a concept that runs through recent Chinese military doctrine. That is, bioweapons that do not kill humans, animals and plants or attack them at the macroscopic level, but destroy the structure and physiological functions of humans, animals and plants via microscopic molecular structures and functions.

Moderated conquest: Instead of killing the enemy, bio-based warfare agents can temporarily disable the enemy and prevent participation in war or kill and injure by specific race or ethnicity in a limited way using genetic bioweapons.

Biotechnology-information technology superiority: Greatly increase China’s military superiority and deterrence level by fusing information-based warfare with bio-based war using advanced biotechnologies.

Bio-based war operational approaches: Citing the SARS 2002-2004 and COVID19 pandemics as examples, the secret initiation of epidemics during war to reduce the enemy’s fighting capability or in “pre-war” situations to prevent potential adversaries from mobilizing effectively on the eve of war.

Vaccines as bio-based weapons: Vaccines with “backdoors” can be bio-based warfare vectors present as biological time bombs once inside the

body or creating vulnerabilities to future bioweapon attacks. The introduction of such “backdoor” vaccines into the U.S. population is especially risky in inadequately regulated joint vaccine production ventures between Chinese and U.S. pharmaceutical companies, not unlike the introduction of Chinese surveillance capabilities inside Chinese instrumentation and software deployed in the United States.

x

The above-described developments are not occurring in isolation. People’s Liberation Army Colonel Ji-Wei Guo’s 2010 book “Bio-based war—Reconfiguring Military Strategy for a New Era” highlights the necessity for integrating information warfare with bio-based war to manipulate a disease outbreak or pandemic using propaganda, spread disinformation and create chaos and fears, all elements of the COVID-19 experience.

That and other approaches supporting bio-based war have been incorporated in the 2021 Chinese Communist Party’s 14th Five-Year Plan, which mandated the fusion of the biotechnology and information technology research sectors, in particular, artificial intelligence, as well as the massive collection of human genetic (DNA) information into China’s databases from both Chinese people and internationally.

The “success” of the People’s Liberation Army’s first-generation, bio-based warfare agent, COVID-19, has only accelerated China’s military ambitions.

Especially Plausible Deniability. We are approaching the appearance of the For Real Chinavirus. The Chicoms are so confident of victory they don't try to camouflage their tactics anymore.

Correct. They've been working on a race-specific bioweapon targeting - guess who - that fountain of all evil on the planet, the Caucasians. I read that this project has been underway for about ten years so pretty soon we should see it loosed upon the planet.

Beijing needs to be a glass parking lot as does Afghanistan.

Of course, Beijing Biden and his thugs will be glad to cooperate in any way they can to help their CCP buddies out...no matter how many Americans may have to be sacrificed on the altar of globalism. Joey says, "Keep those viruses comin', boys, and we'll keep lockin' 'em down."

We are walking towards Armageddon so best start reading your Bibles and stop worrying about the pagans and atheists as they are doomed to slaughter.

Wish it were so. Right now they are thriving.

Biowarfare is a poor man's nuclear weapon. To grow an army of hardware takes time and China likely want Taiwan sooner than later. The danger is losing control of the virus, like COVID.

3

Reply

catapult »**StopNonsense** Oct 31

And for that reason the CCP is (and for a long time has been) working on race-specific bioweapons aimed at - you guessed it - that evil boogie man, Caucasians.

1

It'd be such a shame if one of their bugs got loose and only attacked CCP goon DNA...

Reply

catapult »**celticross** Oct 31 Edited

Well if you read the news they are getting slammed by COVID right now, even as we write. But don't assume that is an accident. The CCP has been trying to reduce China's population first by limiting family size, then through forced abortions, now by injecting toddlers with deadly "vaccines". The CCP wants a population that is easier to dominate/manage, thus the drive to depopulation.

China has continue working on bio-warfare:SARS-CoV3 year 2022, SARS-CoV4 year 2023, SARS-CoV5 year 2024 ?

China now owns the high ground. We'd probably be the nukee rather than the nuker. Too bad Trump didn't have a little more time to develop Space Force.

No wonder why China volunteered to put up labs everywhere for Covid testing. They wanted our DNA. Which I figured thats why but this just confirms it.
