We are killing our kids. Does anyone care?

Kids that would have never died from COVID are now dying after getting the vaccine. Will it ever end?

Steve Kirsch

Nov 20 233 218

Recently, Dr. Toby Rogers did a risk-benefit analysis showing we'll kill 117 kids for every kid we save from COVID with the vaccines aged 5 to 11.

The ratio doesn't really change if they change the dose, e.g., to a third of the adult dose. It means fewer kids saved and fewer kids killed, but Toby estimates the ratio would be about the same. Whether it is 117 or 10, it doesn't matter. We will kill a lot more kids than we will ever save with these vaccines.

What Toby predicted is now coming true.

We can't show it is 117 to 1, but we can show for sure we are killing more kids than we are saving because kids that would have never died before are now dying

With COVID, only children with pretty severe health problems would die: we don't know of a single kid, 5 to 11, who died from COVID who didn't have some pretty serious health issues before they got COVID.

Those days are now gone. We're now killing the healthy kids.

The vaccines rolled out for kids 5 to 11 starting on November 7. It is now just 12 days later and **we are now killing perfectly healthy kids.**

I just got this text:

Today 6:08 PM

3 third graders just died in Pennsylvania. 2 last night and one the day before.

iMessage

That's hardly an isolated incident.

These deaths simply are never ever going to be reported in the NY Times or on CNN. So you're never going to hear about them except from alternate media sources like this substack article. So only around 20,000 people will ever see these deaths.

Here's another example. Another canary in the coal mine.

First time in her 14-year career: seeing an 8 year old with myocarditis

I saw this Tweet from one of my followers. First time in her 14 year career she has ever seen an 8 year old child with myocarditis. Welcome to the "new normal."

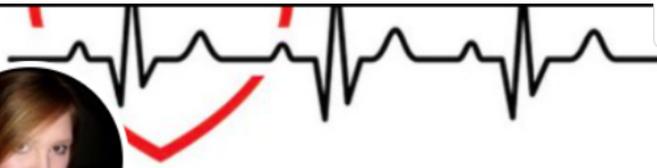

If it wasn't the vaccine, how do you explain this?

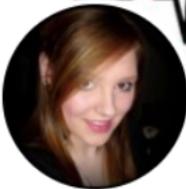

14 years in ER and ICU.

7 days after the vax available to 5-11 on Nov 10!

Deadly even at 1/3 the dose!

withdra

For the first time in my career, I took care of an 8 year old little boy with myocarditis in the ER. It has begun.

🗨 649 🔄 5.7K ❤ 8.4K 📤

It's happening for older kids too, not just the youngest. Here's a video of Ernest Ramirez who lost his only child, his 16-year old son. I've talked to Ernest. His son had zero health issues. He got the first dose of Pfizer and just 5 days later his heart had doubled in size and he died of cardiac arrest while in the park. Dr. Peter McCullough, one of the nation's most respected cardiologists reviewed the autopsy report and determined the vaccine killed the child. But the CDC simply ignores that because the medical examiner who did the autopsy (after a huge amount of pleading by the father) just said his son died of heart failure, not the vaccine.

Please click the image to watch the video, it's only 2 minutes long:

Here is the grieving father's story 🥺💔

Truth Justice @LakovosJustice · Nov 13

Autopsy confirmed the death of this healthy 16 year old boy was caused by the Pfizer 1st dose. His heart was double in size just 5 days after the first shot due to Myocarditis "inflammation of the heart" a known side effect of this dangerous jab. Mandates will kill more children.

This phenomenon isn't just unique to the US. I got this from one of my UK readers about increase mortality among the young:

Here some analysis of excess mortality in UK teens as the 2nd vax jabs started:

Sleuthing from Down Under

Are the Vaccines Killing UK Teens?

There has been a bit of commentary about the risk Covid-19 poses to UK teens and the merit or otherwise of vaccinating them in light of this risk. The Telegraph recently reported Covid killed just six healthy children during the pandemic, while lockdowns have fuelled a timebomb of health disorders among the young, new data showed...

Once these kicked in excess mortality switched from negative to positive where it has stayed. Unlike unvaxed children.

A [summary article confirms the shots make no sense for kids in the UK](#) and points out this inconvenient truth about the myocarditis rates are higher after vaccination than before vaccination. The vaccines clearly made things worse, not better:

A Incident cases of myocarditis

B Incident cases of pericarditis

So how we handle this? Our government will ignore all of this data push even harder to vaccinate every child in sight as soon as possible. In just 10 days, they've vaccinated 10% of our kids.

It's really tragic. I'm 65 years old and I've never seen anything like this. It's like mandating that your kids play Russian Roulette and if they survive, there is virtually no benefit since they weren't going to die anyway.

All my calls to members of Congress I know go unreturned: Anna Eshoo, Ro Khanna, Bill Foster, John Garamendi, Jackie Speier, Zoe Lofgren, to name a few. None of them care enough to return any of my calls. They are all convinced the vaccines are safe and effective and will do nothing to stop this. They refuse to listen to anything unless it supports “narrative.” If you aren’t on board, you’re evil and will not be listened to.

The only people in Congress who can see the truth are Ron Johnson and Thomas Massie. Everyone else is pro-vaccine AFAIK.

The data clearly says the vaccines is unsafe, but nobody has time to look at the data themselves. If most of the doctors say it is safe, then it must be safe, no matter how many kids die.

Even the experts who are trusted to look at the data simply turn a blind eye to deaths of our kids. Deaths that are completely abnormal are dismissed without comment. I wrote a [long article about how to this day, we still don't know the cause of death of the 14 kids that the CDC investigated](#). They simply list the causes and then change the topic. For example, two of the 14 kids died from intracranial hemorrhage. Kids never die from intracranial hemorrhage after getting a vaccine. **In the entire 30-year history of the VAERS system, there are no reports in that age range dying from intracranial hemorrhage. Zero. Zip. Nada.**

So you’d think that THAT would raise a red flag? You’d be mistaken. The crack CDC team didn’t miss a beat and kept right on going as if nothing had happened. And if you can gloss over that one, then the others are easy to gloss over. And that’s exactly what they did.

The CDC and FDA have been so successful on spotting safety signals that they **haven’t found a single serious adverse event so far** (they admitted that DoD found myocarditis). So the fact that “acute cardiac failure” is elevated by more than 475X over the average year in VAERS doesn’t seem to generate a signal.

Here are a list of just the cardiac symptoms alone that are elevated by 200X normal or more.

1	Symptoms	C19 Count	Baseline count	X factor
2	Heart rate	3,189	2	7973
3	Cardiac failure acute	95	1	475
4	N-terminal prohormone brain natriuretic peptide (indicates heart failure)	88	1	440
5	Body temperature abnormal	172	2	430
6	Acute myocardial infarction (the fancy name for heart attack)	659	8	412
7	Cardiac ablation (procedure to scar your heart to restore normal heart function)	75	1	375
8	Left ventricular hypertrophy	70	1	350
9	Arteriogram carotid abnormal	69	1	345
10	Stress echocardiogram	69	1	345
11	Internal haemorrhage	68	1	340
12	Coronary artery occlusion	132	2	330
13	Carditis (inflammation of the heart)	65	1	325
14	Peripheral artery thrombosis	62	1	310
15	Pulseless electrical activity (PEAs are a sign you're going to die)	123	2	308
16	N-terminal prohormone brain natriuretic peptide increased (heart damage)	118	2	295
17	Arteriogram coronary abnormal	59	1	295
18	Ventricular hypokinesia	93	2	233
19	Acute left ventricular failure	46	1	230
20	Myocardial ischaemia	46	1	230
21	Magnetic resonance imaging thoracic abnormal	45	1	225
22	Tri-iodothyronine	45	1	225
23	Arterial occlusive disease	44	1	220
24	Angiogram abnormal	173	4	216
25	Percutaneous coronary intervention	42	1	210
26	Troponin increased	1,845	45	205
27	Catheterisation cardiac	482	12	201
28	Electrocardiogram ST segment abnormal	80	2	200
29	Coronary artery dissection	40	1	200
30	Epinephrine	40	1	200
31	Cerebral venous thrombosis	39	1	195

Does that look like a safe vaccine to you? Of course not!

Does it matter? Of course not!

I made a short presentation which summarizes how dangerous the vaccines are to people of all ages, but nobody really wants to look at it:

Vaccine essentials

If you have an open mind, you will find the presentation very compelling. If you don't have an open mind, you'll just say, "Was it peer reviewed? If not, I'm not going to look at it" even though it references peer-reviewed studies.

The people on the advisory committees are never going to look at that presentation. They'd all prefer to keep their head in the sand to avoid the cognitive dissonance. They all believe COVID is more dangerous than the vaccine still. This isn't based on actual numbers. It is based on their belief system. So even though we have evidence like this showing the vaccines are massively more dangerous than the virus,

Ely Writes The Truth Patrol · 22 hr ago

I just heard from a cardiologist who stated that since the vaccine rollout, he has seen a 100X increase in cases of myocarditis or pericarditis. These monsters (big pharma, politicians and MSM) are killing people. Totally unconscionable to suppress this information, all for a vaccine that doesn't work.

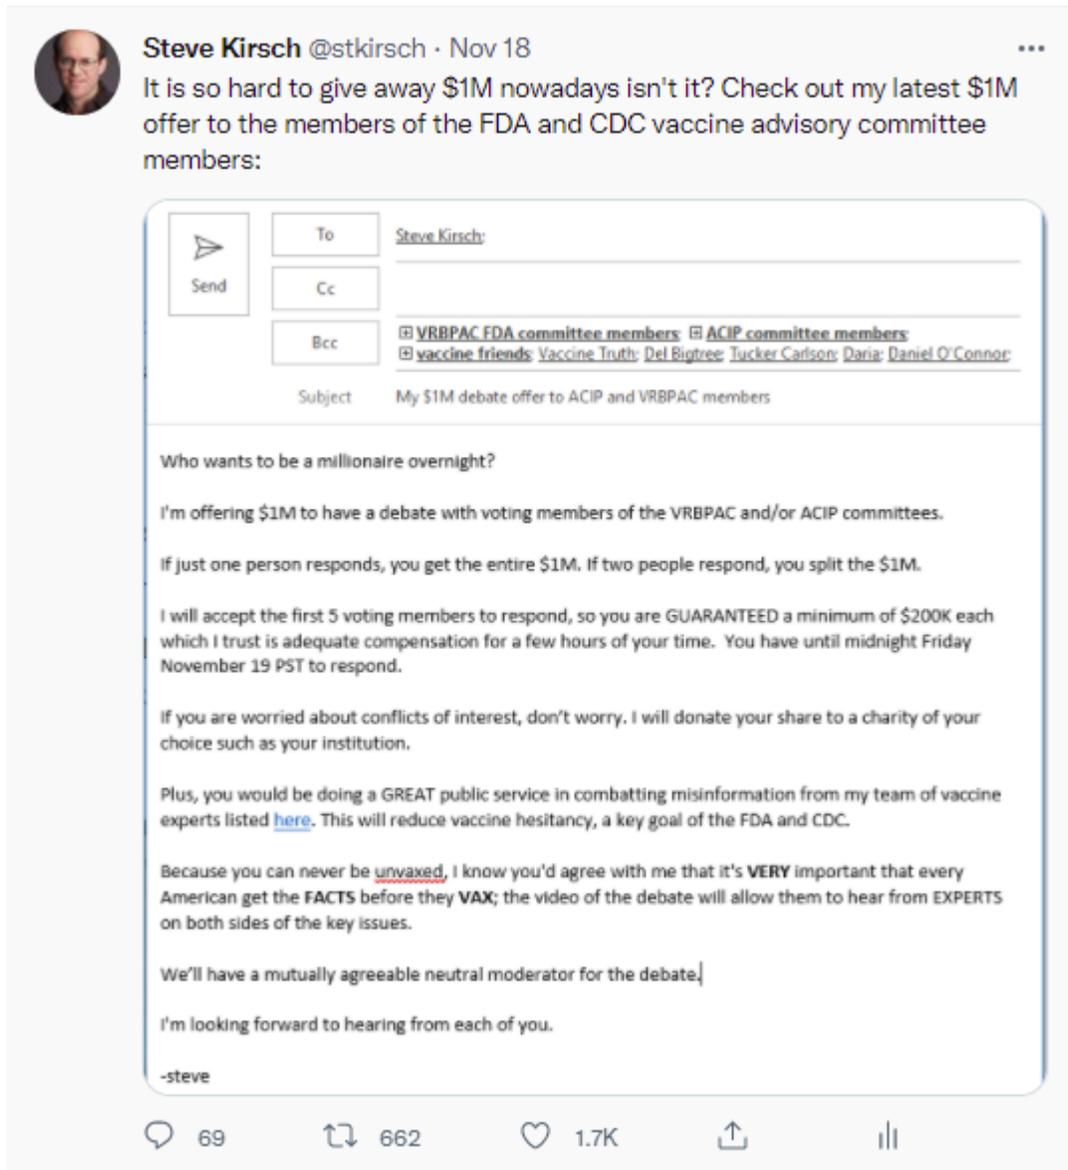

♡ 4 Reply ...

it just does not "register" with people since it is contrary to what they were told. So it gets ignored as a "fabrication" or as an "anecdote."

Not only that, but I am labelled by the medical community as an "evil person" who is spreading information that is causing the death of people. This is an attempt at gaslighting,

but it doesn't work because I am focused solely on what the data is showing and not how other people choose to misinterpret that data.

I find it telling that nobody who is a prominent proponent of vaccination is willing to sit down and have a recorded discussion with my team of experts. As shown below, I even offered them a million dollars to come have a discussion with us and nobody was interested.

Someday they will figure this out. I hope it is soon.

Please forward this article and promote it on your social networks. **The big social networks will probably terminate your account(s) for doing this, but isn't it worth it if you can save just one child's life?**

Interesting article. I have written today an article about the german mortality cause statistic (Todesursachenstatik). According to this date we had no death for people aged 0-20. Zero. So there is never be a chance to make any kind of risk reduction based on death.

Nobody believes you because we're not buying into this persecution fantasy that corporations and the big bad government actually want to kill kids. Why would that be true? A million kids have now been vaccinated, where are all the deaths? Oh they're being attributed to things other than covid. What if they actually were things other than covid?

I am an educated person. I have a PhD from a mainstream university. I can't debate statistics and medical study design. But until you can answer those questions in a way that makes sense on a human level I question your motives and biases. Medicine has been wrong in important ways that have wrecked lives and caused deaths, but what they haven't been, by and large, is malicious. Whereas your side goes ballistic over tyranny when asked to wear a mask in public. I have to trust someone and your side is not credible.
